

## JetViewer Gives **Acrison**® Business Overview

When Acrison International's MD, Doug Henry, first came across JetViewer he realised it could take their **business intelligence** to a new level.

Acrison, a pioneering multinational producer of specialist powder dosing systems, had valuable information in their ERP system but could not maximise the benefit it offered, they were restricted in the way they could access and format the information.

"**JetViewer** is much more than a reporting tool, it's a portal onto your whole business"

**Doug Henry,**  
Managing Director,  
Acrison International

Acrison are committed to Lean Manufacturing; lowest cost, smartest production, minimum stock, minimum waste and efficient and effective systems – and they need information systems that support this.

They had looked into using some of the leading reporting tools but found that identifying the information in the first place was often complex, time consuming and difficult. **JetViewer** offered an **efficient, intuitive and user friendly** way to find and link across the information in their ERP system.

For example, Acrison used **JetViewer** to link between their sales and purchase orders allowing them to analyse actual costs and assimilate lessons learned from previous projects. This meant they could accurately predict costs and hence provide **competitive and profitable quotations** for future projects.

"Successful continuous improvement requires an objective view of where your business stands. **JetViewer** will give you this."

**Paul Hardwick,**  
Financial Controller,  
Acrison International

**JetViewer** gives Acrison a joined up view of their systems – providing an invaluable overview of their business and allowing them to extract detailed information on areas of interest as they arise. Being able to see the full project life cycle allows Doug and his team to identify the value chain and focus on areas for **lean manufacturing** and **continuous improvement** strategies.
